# Chapter 1

## Hierarchical Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

rtfem::FEMAssembler . . . . .	5
rtfem::FEMModel . . . . .	5
rtfem::FEMSolver . . . . .	6
rtfem::FiniteElement . . . . .	6
rtfem::TetrahedronFiniteElement . . . . .	12
rtfem::FiniteElementSolver . . . . .	7
rtfem::TetrahedronSolver . . . . .	12
rtfem::FiniteElementSolverData . . . . .	7
rtfem::GlobalStiffnessAssembler . . . . .	8
rtfem::Material . . . . .	9
rtfem::Matrix . . . . .	9
rtfem::MatrixDimension . . . . .	11
rtfem::MatrixMath . . . . .	11
rtfem::Vector3 . . . . .	13
rtfem::Vertex . . . . .	13

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">rtfem::FEMAssembler</a>	5
<a href="#">rtfem::FEMModel</a>	5
<a href="#">rtfem::FEMSolver</a>	6
<a href="#">rtfem::FiniteElement</a>	6
<a href="#">rtfem::FiniteElementSolver</a>	7
<a href="#">rtfem::FiniteElementSolverData</a>	7
<a href="#">rtfem::GlobalStiffnessAssembler</a>	8
<a href="#">rtfem::Material</a>	9
<a href="#">rtfem::Matrix</a>	9
<a href="#">rtfem::MatrixDimension</a>	11
<a href="#">rtfem::MatrixMath</a>	11
<a href="#">rtfem::TetrahedronFiniteElement</a>	12
<a href="#">rtfem::TetrahedronSolver</a>	12
<a href="#">rtfem::Vector3</a>	13
<a href="#">rtfem::Vertex</a>	13

## Chapter 3

# Class Documentation

### 3.1 rtfem::FEMAssembler Class Reference

#### Public Member Functions

- **Matrix ComputeGlobalStiffness** (const std::shared\_ptr< [FEMModel](#) > fem\_model)

The documentation for this class was generated from the following files:

- /home/samba/ciecierskij/programming/rt\_fem/sources/include/RTFEM/FEM/Solver/FEMAssembler.h
- /home/samba/ciecierskij/programming/rt\_fem/sources/src/RTFEM/FEM/Solver/FEMAssembler.cpp

### 3.2 rtfem::FEMModel Class Reference

```
#include <FEMModel.h>
```

#### Public Member Functions

- **FEMModel** (std::vector< std::shared\_ptr< [FiniteElement](#) >> &finite\_elements\_, std::vector< std::shared\_ptr< [Vertex](#) >> &vertices\_, const [Material](#) &&material)
- const std::vector< std::shared\_ptr< [FiniteElement](#) >> & **finite\_elements** () const
- const std::vector< std::shared\_ptr< [Vertex](#) >> & **vertices** () const
- [Material](#) & **material** ()
- UInt **VertexCount** ()
- UInt **FiniteElementCount** ()

#### 3.2.1 Detailed Description

[FEMModel](#) contains model of a single connected object. TODO: What does it mean ^ ?

The documentation for this class was generated from the following files:

- /home/samba/ciecierskij/programming/rt\_fem/sources/include/RTFEM/FEM/FEMModel.h
- /home/samba/ciecierskij/programming/rt\_fem/sources/src/RTFEM/FEM/FEMModel.cpp

### 3.3 rtfem::FEMSolver Class Reference

#### Public Member Functions

- **FEMSolver** (const ConstitutiveSolverType &&constitutive\_solver\_type, const GeometrySolverType &&geometry\_solver\_type, const AnalysisSolverType &&analysis\_solver\_type)
- const ConstitutiveSolverType & **constitutive\_solver\_type** ()
- const GeometrySolverType & **geometry\_solver\_type** ()
- const AnalysisSolverType & **analysis\_solver\_type** ()
- void **Solve** (const std::shared\_ptr< [FEMModel](#) > fem\_model)

The documentation for this class was generated from the following files:

- /home/samba/ciecierskij/programming/rt\_fem/sources/include/RTFEM/FEM/Solver/FEMSolver.h
- /home/samba/ciecierskij/programming/rt\_fem/sources/src/RTFEM/FEM/Solver/FEMSolver.cpp

### 3.4 rtfem::FiniteElement Class Reference

```
#include <FiniteElement.h>
```

Inheritance diagram for rtfem::FiniteElement:

#### Public Member Functions

- **FiniteElement** (const FiniteElementType &&type)
- const FiniteElementType & **type** () const
- const std::vector< std::shared\_ptr< [Vertex](#) > > & **vertices** ()
- virtual UInt **GetVertexCount** () const =0

#### Protected Attributes

- std::vector< std::shared\_ptr< [Vertex](#) > > **vertices\_**

#### 3.4.1 Detailed Description

Abstract class for Finite Element.

The documentation for this class was generated from the following files:

- /home/samba/ciecierskij/programming/rt\_fem/sources/include/RTFEM/FEM/FiniteElement.h
- /home/samba/ciecierskij/programming/rt\_fem/sources/src/RTFEM/FEM/FiniteElement.cpp

## 3.5 rtfem::FiniteElementSolver Class Reference

```
#include <FiniteElementSolver.h>
```

Inheritance diagram for rtfem::FiniteElementSolver:

### Public Member Functions

- virtual [FiniteElementSolverData](#) **Solve** (std::shared\_ptr< [FiniteElement](#) > finite\_element)=0

#### 3.5.1 Detailed Description

Computes [FiniteElementSolverData](#) for a given [FiniteElement](#).

The documentation for this class was generated from the following files:

- /home/samba/ciecierskij/programming/rt\_fem/sources/include/RTFEM/FEM/Solver/FiniteElementSolver.h
- /home/samba/ciecierskij/programming/rt\_fem/sources/src/RTFEM/FEM/Solver/FiniteElementSolver.cpp

## 3.6 rtfem::FiniteElementSolverData Struct Reference

```
#include <FiniteElementSolver.h>
```

### Public Attributes

- Float **volume**
- [Matrix](#) **shape\_matrix**
- [Matrix](#) **geometry\_matrix**

#### 3.6.1 Detailed Description

Contains: Volume. Shape [Matrix](#) Geometry [Matrix](#)

Coordinates: x2 is assumed to point 'up'

The documentation for this struct was generated from the following file:

- /home/samba/ciecierskij/programming/rt\_fem/sources/include/RTFEM/FEM/Solver/FiniteElementSolver.h

## 3.7 rtfem::GlobalStiffnessAssembler Class Reference

```
#include <GlobalStiffnessAssembler.h>
```

### Public Member Functions

- [Matrix Compute](#) (const std::shared\_ptr< [FEMModel](#) > fem\_model)

#### 3.7.1 Detailed Description

Local Stiffness [Matrix](#) ( $k$ ) is the stiffness of each element  $[3N_e \times 3N_e]$  e.g. for Tetrahedron ( $N_e = 3$ ) thus: (dim =  $[12 \times 12]$ )

Global Stiffness [Matrix](#) ( $K$ ) is the stiffness of entire FEM Model  $[3N \times 3N]$  e.g. For 9 vertices (dim =  $[27 \times 27]$ )

Partial Global Stiffness [Matrix](#) ( $K_e$ ) is the matrix of dimension equal to Global Stiffness but filled with only Local Stiffness data.

#### 3.7.2 Member Function Documentation

##### 3.7.2.1 Compute()

```
Matrix rtfem::GlobalStiffnessAssembler::Compute (
    const std::shared_ptr< FEMModel > fem_model )
```

Computes Global Stiffness [Matrix](#) ( $K$ ).

- 1) Computes Constitutive Matrix ( $C$ )
- 2) Computes Geometry Matrix ( $B$ ) for each Finite Element
- 3) Computes Local Stiffness ( $k$ ) for each Finite Element
  - Using Constitutive Matrix and Geometry Matrix.
- 4) Assembles all Local Stiffness matrices into Global Stiffness Matrix ( $K$ )

#### Parameters

<i>fem_model</i>	
------------------	--

#### Returns

The documentation for this class was generated from the following files:

- /home/samba/ciecierskij/programming/rt\_fem/sources/include/RTFEM/FEM/Solver/GlobalStiffnessAssembler.[↔](#)h
- /home/samba/ciecierskij/programming/rt\_fem/sources/src/RTFEM/FEM/Solver/GlobalStiffnessAssembler.[↔](#)cpp

## 3.8 rtfem::Material Struct Reference

```
#include <Material.h>
```

### Public Attributes

- Float **young\_modulus**
- Float **poisson\_coefficient**

### 3.8.1 Detailed Description

One [Material](#) per [FEMModel](#)

TODO: Bounds of material properties (e.g. poisson [0, 0.5])

TODO: [Material](#) could be bound to each [FiniteElement](#) separately, allowing for 'illusion' of composite materials. That would require computing Constitutive [Matrix](#) for each [FiniteElement](#).

The documentation for this struct was generated from the following file:

- /home/samba/ciecierskij/programming/rt\_fem/sources/include/RTFEM/FEM/Material.h

## 3.9 rtfem::Matrix Class Reference

### Public Member Functions

- [Matrix](#) (UInt row\_count, UInt column\_count)
- **Matrix** (const [MatrixDimension](#) &&matrix\_dimension)
- const [MatrixDimension](#) & **dimensions** () const
- std::vector< Float > & **operator[]** (UInt i)
- const std::vector< Float > & **operator[]** (UInt i) const
- std::vector< Float > & **GetRow** (UInt i)
- const std::vector< Float > & **GetRow** (UInt i) const

### 3.9.1 Constructor & Destructor Documentation

#### 3.9.1.1 Matrix()

```
rtfem::Matrix::Matrix (
    UInt row_count,
    UInt column_count )
```

Creates [Matrix](#) with row\_count rows and column\_count columns

**Parameters**

<i>row_count</i>	
<i>column_count</i>	

## 3.9.2 Member Function Documentation

### 3.9.2.1 GetRow()

```
std::vector< Float > & rtfem::Matrix::GetRow (
    UInt i )
```

Returns i-th row.

**Parameters**

<i>i</i>	
----------	--

**Returns**

### 3.9.2.2 operator[]()

```
std::vector< Float > & rtfem::Matrix::operator[] (
    UInt i )
```

Returns i-th row.

**Parameters**

<i>i</i>	
----------	--

**Returns**

The documentation for this class was generated from the following files:

- /home/samba/ciecierskij/programming/rt\_fem/sources/include/RTFEM/DataStructure/Matrix.h
- /home/samba/ciecierskij/programming/rt\_fem/sources/src/RTFEM/DataStructure/Matrix.cpp

## 3.10 rtfem::MatrixDimension Struct Reference

### Public Member Functions

- **MatrixDimension** (UInt row\_count, UInt column\_count)

### Public Attributes

- UInt **row\_count**
- UInt **column\_count**

The documentation for this struct was generated from the following file:

- /home/samba/ciecierskij/programming/rt\_fem/sources/include/RTFEM/DataSet/Matrix.h

## 3.11 rtfem::MatrixMath Class Reference

### Public Member Functions

- Float **ComputeDeterminant2** (const [Matrix](#) &matrix)
- Float **ComputeDeterminant** (const [Matrix](#) &matrix)
- [Matrix](#) **ContractMatrix** (const [Matrix](#) &matrix, UInt row, UInt column)

### 3.11.1 Member Function Documentation

#### 3.11.1.1 ContractMatrix()

```
Matrix rtfem::MatrixMath::ContractMatrix (
    const Matrix & matrix,
    UInt row,
    UInt column )
```

Removes specified row and column thus new matrix has dimension [N-1 x M-1]

#### Parameters

<i>matrix</i>	
<i>row</i>	
<i>column</i>	

#### Returns

The documentation for this class was generated from the following files:

- /home/samba/ciecierskij/programming/rt\_fem/sources/include/RTFEM/Math/MatrixMath.h
- /home/samba/ciecierskij/programming/rt\_fem/sources/src/RTFEM/Math/MatrixMath.cpp

### 3.12 rtfem::TetrahedronFiniteElement Class Reference

Inheritance diagram for rtfem::TetrahedronFiniteElement:

#### Public Member Functions

- **TetrahedronFiniteElement** (std::shared\_ptr< [Vertex](#) > vertex1, std::shared\_ptr< [Vertex](#) > vertex2, std::shared\_ptr< [Vertex](#) > vertex3, std::shared\_ptr< [Vertex](#) > vertex4)
- UInt **GetVertexCount** () const override

#### Additional Inherited Members

The documentation for this class was generated from the following files:

- /home/samba/ciecierskij/programming/rt\_fem/sources/include/RTFEM/FEM/FiniteElements/TetrahedronFiniteElement.h
- /home/samba/ciecierskij/programming/rt\_fem/sources/src/RTFEM/FEM/FiniteElements/TetrahedronFiniteElement.cpp

### 3.13 rtfem::TetrahedronSolver Class Reference

```
#include <TetrahedronSolver.h>
```

Inheritance diagram for rtfem::TetrahedronSolver:

#### Public Member Functions

- virtual [FiniteElementSolverData](#) **Solve** (std::shared\_ptr< [FiniteElement](#) > finite\_element) override

### 3.13.1 Detailed Description

Solver for Linear Tetrahedron (constant gradient of shape function). The geometry matrix B is constant with respect to X (and always will be constant, independent of material/strain equations)

Solver Data: Shape [Matrix](#): [3 x 12] Used in computing Force vector

Geometry matrix: [6 x 12] (Shape function gradient) Used in computing Stiffness [Matrix](#)

The documentation for this class was generated from the following files:

- [/home/samba/ciecierskij/programming/rt\\_fem/sources/include/RTFEM/FEM/Solver/FiniteElementSolvers/TetrahedronSolver.h](#)
- [/home/samba/ciecierskij/programming/rt\\_fem/sources/src/RTFEM/FEM/Solver/FiniteElementSolvers/TetrahedronSolver.cpp](#)

## 3.14 rtfem::Vector3 Struct Reference

### Public Member Functions

- **Vector3** (Float x, Float y, Float z)

### Public Attributes

- Float **x**
- Float **y**
- Float **z**

The documentation for this struct was generated from the following files:

- [/home/samba/ciecierskij/programming/rt\\_fem/sources/include/RTFEM/DataSet/Vector3.h](#)
- [/home/samba/ciecierskij/programming/rt\\_fem/sources/src/RTFEM/DataSet/Vector3.cpp](#)

## 3.15 rtfem::Vertex Class Reference

### Public Member Functions

- **Vertex** (UInt id, const [Vector3](#) &&coordinates)
- UInt **id** () const
- const [Vector3](#) & **coordinates** () const

The documentation for this class was generated from the following files:

- [/home/samba/ciecierskij/programming/rt\\_fem/sources/include/RTFEM/FEM/Vertex.h](#)
- [/home/samba/ciecierskij/programming/rt\\_fem/sources/src/RTFEM/FEM/Vertex.cpp](#)
